

# SECURE MODULAR SHELTER APPARATUS

*A New Public Shelter For Manufacturers Of Outdoor Enclosures*

We are pleased to introduce an enclosure appropriately entitled "Green Stop". The patent, briefly shown here provides an enclosure that protects occupants from the elements when waiting at a bus stop, train station, ATM or any other place for communicating out of doors. The enclosure comes equipped with its own energy source and solar powered back up. It is a secure enclosure that has tinted glass and cameras with means for calling police, fire or ambulance service. When appropriate the Green Stop provides heating and cooling in a smoke free environment.

Today bus and train passengers as well as ATM users and those at other outdoor facilities are basically exposed and unprotected during their waiting outdoors. The need for a better and more secure outdoor enclosure led inventor Darlene William-Prades to the development of her Secure Modular Shelter Apparatus. She designed the

perfect outdoor waiting enclosure that makes it a pleasure or more acceptable to wait for transit or services. It comes equipped with security means as well as climate control making it ideal for use year round.

The design used by the inventor is simple and uncomplicated. This allows the shelter to be easily mass produced from a variety of appropriate materials at a very affordable price. It is a shelter that has been awarded a United States Patent and which is now ready for introduction to the public and private sector markets.

### **Sales Potential**

Once introduced acceptance by the public and various transit authorities as well as banks and our facilities should be enthusiastic and immediate. Marketing will be easy as it will use outlets currently being used for similar shelters and waiting areas. In addition it can be

attractively offered in a variety of trade publications and appropriate magazines. It is a remarkably versatile enclosure that opens up a new and highly profitable product line with unlimited national and international marketing opportunities.

### **Commentary**

We are excited about the possibilities offered by this enclosure to the waiting public. Finally a better enclosure that is secure, easy to use and can be used virtually in any outdoor waiting area. When considering the millions of outdoor facilities that need this enclosure the possibilities for profit potential by the right manufacturer is unbelievable.
